

# Installation and Integration of Virtual Clusters onto Pragma Grid

NAIST Nara, Japan  
Kevin Lam 08/30/13

## Week 8: VM Image Corrections

- We received feedback from the PRAGMA administrator regarding our machines. Previously, our machines were partitioned using LVM. We switched it to a normal ext flat partition. We also created a more secure password for the root account.
- There was a big problem with our uploaded VM. A regular user account named “admin” was previously created but not deleted. The account was compromised in public servers and thus had to be taken down. A totally new VM with the name Barco was created which included the changes above.

# After the Program

- Final presentation is on Monday. Power point slides need to be finished.
- After the program, we need to finish uploading our VMs to the PRAGMA cloud and the configure N2N.
