Port of Japanese Friendship Garden Android app Haiku Hunt into iOS

Update for July 2nd
Week 1

Prime internship in Osaka, Japan

In collaboration with BPOC, PRIME, NICT, ISID, & Japanese Friendship Garden

Project Overview

- Deployment of iBeacons on iOS platform
  - Two main objectives
    - 1.) Port Android Haiku Hunt application written by Jesus Rios of PRIME 2013 onto iOS
    - 2.) Map user location using iBeacons
      - Possible future uses:
        - Delivering data to users when they reach a certain location
        - Monitoring user location

Progress for This Week

- Got Haiku Hunt app finished. Need to polish up user interface to ensure uniform display across all iOS devices; will work on this gradually throughout the internship

- Non-code related progress: logistics related matters (getting wi-fi set up in the house, getting a monthly train ticket, getting keycard access to VisLab, etc) was completed, thanks to many people like Takata-san, Kawamura-san, Shimojo-sensei, various assistant grad students of Shimojo-sensei.

Plans for Next Week

- Start on new project concerning mapping user location using iBeacons
  - Possible starting point: write a basic single view iOS app that displays user location on a grid relative to iBeacons
