MARKOV STATE MODEL CONSTRUCTION THROUGH KEPLER WORKFLOWS

NATIONAL TAIWAN UNIVERSITY
TAIPEI

Wednesday, August 6, 2014

Progress Made This Week

- Identified several inconsistencies in the BuildMSM.kar workflow
  - Workflow did not allow for several systems to run at the same time
  - Attempted to run workflow with multiple systems, still a work in progress
- Removed several unnecessary components from the file copying workflow
  - This should make file copying faster

Plans for the Next Few Weeks

- Finish removing unnecessary sections of the file copy workflow
  - Create a possible second workflow to accommodate a more streamlined file copying process
- Move the aligning workflow up to better manage the workflow sequence
- Finalize the structure of the BuildMSM.kar workflow to bring it in line with the structure of the other workflows
  - Redo the second half of the workflow and resolve several errors
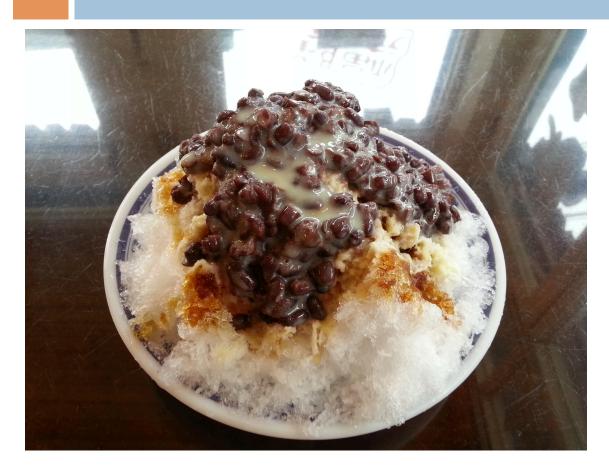

I didn't know Taiwan had such great beach towns

Above: This is the cute little town of Fulong
Right: And this is their large, sandy, perfect beach

Delicious summertime food

I'm so glad I'm learning Mandarin, because I was able to order *hongdou niunai baobing* (red bean and sweet milk shaved ice).

Zhajiangmian, noodles with fried soybean and meat sauce, which tastes good any time of the year.

A Big *xièxie* To:

- The Ledell Family for their generous scholarship
- Professor Rommie Amaro and Professor Jung-Hsin Lin for being a gracious host
- Dr. Robert Malmstrom, for his guidance on MSM construction
- Teri Simas, Dr. Gabriele Wienhausen, and everyone at PRIME who made this program possible
